None of the documents cited in the ISR describes the constitution in the subject matters of claims 1 and 3-9, in which (1) a winding drum is formed like a gently inclining cone, and (2) an inclining surface extending obliquely outward is formed on the inner end faces of the side walls surrounding one end of the winding drum, so that a lift cord can be wound around the winding drum in an orderly manner. This constitution is not considered to be obvious to a person skilled in the art either.
